

PATENT COOPERATION TREATY

PCT

NOTIFICATION OF ELECTION

(PCT Rule 61.2)

From the INTERNATIONAL BUREAU

To:

Commissioner
 US Department of Commerce
 United States Patent and Trademark
 Office, PCT
 2011 South Clark Place Room
 CP2/5C24
 Arlington, VA 22202
 ETATS-UNIS D'AMERIQUE
 in its capacity as elected Office

Date of mailing (day/month/year) 04 July 2001 (04.07.01)	
International application No. PCT/US99/23781	Applicant's or agent's file reference 604.10-PCT
International filing date (day/month/year) 12 October 1999 (12.10.99)	Priority date (day/month/year)
Applicant HERRING, Sergio et al	

1. The designated Office is hereby notified of its election made:

☒ in the demand filed with the International Preliminary Examining Authority on:
 17 August 2000 (17.08.00)

☐ in a notice effecting later election filed with the International Bureau on:

2. The election ☒ was
☐ was not

made before the expiration of 19 months from the priority date or, where Rule 32 applies, within the time limit under Rule 32.2(b).

LETTER FOR PCT ARTICLE 19 AMENDMENT OF CLAIMS
(PCT SECTION 205)

1. Applicant herewith submits replacement sheets(s) number(ed) 14 - 15 to replace sheet(s) number(ed) 14 - 15, originally filed for this application.
2. In respect of each claim appearing in the international application based on the replacement sheets submitted herewith, and in accordance with PCT Section 205, the following claim(s) is/are:
 - (i) unchanged: claim(s): 2-4, 6-8, 10
 - (ii) cancelled: claim(s): none
 - (iii) new: claim(s): none
 - (iv) replacement of one or more claims as filed, as follows: 1, 5, 9, 11-17
 - (v) the result of the division of one or more claims as filed, as follows: none

Dear Sir:

This letter responds to the Search Report dated 13 January 2000.

Substitute Claim Sheets

Please substitute the attached substitute claim sheets numbered 14 & 15 for the previously filed claim sheets numbered 14 & 15. Claim 1 is amended to recite that (a) the individualized commercials are created subsequent to selecting the prospects, (b) each of at least some of the targeted prospects receive an individualized commercial, (c) the individualized commercials are created rather than merely being produced, and (d) the

targeted prospect for the campaign are selected at least in part based upon a marketing characteristic. Claims 5 and 9 are amended to improve clarity. Claims 11-17 are amended to recite "creation" and "creating" rather than "production" and "producing".

Cited References

The Office indicated that all claims are anticipated by Angles et al. (US 5933811), Robinson (5918014) or Dedrick (5717923). The applicant disagrees with that assessment for the reasons set forth immediately below, especially as the claims have been amended herein.

Angles et al.

The Angles et al. abstract teaches that "upon receiving the advertising request, the advertising computer generates a custom advertisement based upon the consumer's profile." Other supporting language in the specification proper is similar. In the Summary of the Invention section, Angles et al. state that his system provides "an on-line advertising service which can customer tailor specific advertisements to particular consumers and track consumer responses to the advertisements" (Spec. col. 2, lines 45 - 49). The term "customized advertisements" is also employed at spec. col. 3, lines 14, 18-19, again at col. 13, line 49, and elsewhere throughout the specification.

While this may sound somewhat similar to the subject matter of the pending claims if the exact language is taken out of context, there are huge differences once the entire specification is considered. Careful reading of the specification reveals that Angles et al. interpret the term "custom advertisement" to mean custom selection of a pre-existing advertisement, rather than in the custom creation of new advertisements as presently claimed.

Basically, Angles et al. teach an advertising computer 18 using "a consumer profile to select an appropriate advertisement from the advertisement database 70". (spec. col. 15, beginning line 22). That advertisement is then stored on the consumer's own computer 12 in a storage area described as the advertising storage medium 44 (col. 11, line 66 to col. 12, lines 11). The advertising computer 18 then directs the consumer's computer 12 to fetch a web page from a content provider computer 14, to add one of the advertisements previously stored on the consumer's computer as an insert, and then display the web page with advertising insert to the consumer (spec. col. 12, lines 41-60).

It is thus the web page that is being customized adding a canned advertisement, not customization of the advertisement itself. Even where Angles et al. refer to the insert containing a customized advertisement (spec. col. 12, line 57), that advertisement is only customized to the extent that it has been selected from a group of preexisting advertisements. To use Angles et al.'s own words, "[t]he advertising module 62 uses the consumer member code 22 to obtain a consumer member profile from the registration database 68. . . . the advertising module then uses the consumer profile to select an appropriate advertisement from the advertisement database 70." (Spec, col. 15, lines 20-25, emphasis

added). In short, Angle's entire customization process as far as advertisements are concerned is selection of pre-existing advertisements, not creation of new advertisements.

Since this distinction may not have been claimed as clearly as possible in the originally filed claims, claim 1 (and all other claims by virtue of their dependency on claim 1) are amended herein to recite that the individualized commercials are created subsequent to selecting the prospects. To further clarify matters, additional modifications are made to recite that (a) each of at least some of the targeted prospects receive an individualized commercial, and (b) that the individualized commercials are created rather than merely being produced.

Claim 1 is thus amended as follows:

1. A method of conducting an advertising campaign, comprising:
selecting a plurality of targeted prospects for the campaign;
identifying a marketing characteristic for at least some of the targeted prospects;
defining a group of components to be included in the campaign, for which there are at least two alternatives;
subsequently creating a new individualized commercial for each of the at least some of the plurality of targeted prospects [producing a number of individualized commercials] by automatically assembling at least one of the alternatives for each of the components in the group based at least in part upon on the marketing characteristic; and
electronically transmitting at least one of the individualized commercials to a recipient having the marketing characteristic upon which the commercial being transmitted was based.

There are several other limitations recited in the dependent claims that are not satisfied by Angles et al. Claim 2 recites that at least some of the commercials are transmitted as executable files. There is no teaching, suggestion or motivation in Angles et al. to use executable files. Angles et al. contemplate using the advertisements as inserts in web pages, which means that they are executed by the web browser rather than being executable files themselves.

Claim 3 recites authentication of the executable files. Not only does Angles et al. fail to teach transmitting the advertisements as executable files, but there is no teaching, suggestion or motivation in Angles et al. to authenticate the files.

Claim 5 (as amended) recites creating the individualized commercials using a marketing characteristic obtained from information provided in response to a previous electronic commercial. There is no teaching, suggestion or motivation in Angles et al. to use a marketing characteristic obtained from a response to a previous commercial. Angles et al. contemplate that information obtained about the consumer is inputted through a registration form (spec., col. 16, beginning line 57). There is no indication that the registration form is completed in response to a previous commercial, let alone a previous individualized commercial.

Claims 6, 7, 8, and 16 recite inclusion of a video clip in an individualized commercial. There is no teaching, suggestion or motivation in Angles et al. to use video clips in the advertisement, as opposed to a web page that displays the advertisement as an insert.

Claim 10 recites that the commercial is transmitted as using Internet e-mail. There is no teaching, suggestion or motivation in Angles et al. to send the commercial via e-mail, and in fact Angles et al. would much more likely transmit their contemplated advertisements using some other media because they are loaded from the advertiser's computer onto the consumer's computer in background mode.

Claims 11, 12, and 16 (as amended) recite transmitting of at least 10% of the commercials occurs within 24, 2, and 24 hours of their creation, respectively. These limitations are completely contrary to Angles, et al., that teach selecting and transmitting pre-formed advertisements to the consumers. Since the advertisements are intended to be included as inserts in web pages of content providers, it is extremely likely that the advertisements would be prepared weeks or even months in advance so that the content provider's could approve or disapprove of having their content being used in conjunction with the advertisements. There is no teaching, suggestion or motivation for the claimed time limits.

Claims 14, 15, and 17 (as amended) recite creating an average of at least one of the individualized commercials for every 50, 10, and 500 of the targeted prospects, respectively. These limitations are also completely contrary to Angles, et al., that teach selecting and transmitting pre-formed advertisements to the consumers. Since the advertisements are intended to be included as inserts in web pages of content providers, it is extremely likely that there would be only a relatively limited number of advertisements so that the content provider's could approve or disapprove of having their content being used in conjunction with the various advertisements.

Robinson

Robinson teaches systems for determining which of many pre-existing advertisements to select and send to which recipients, based upon classification of each recipient into a "community" of others having similar preferences with respect to non-advertising "content". (Spec., col. 1, line 66 - col. 2, line 3). Different recipients do indeed get different advertisements, but those advertisements are not created individually for the various recipients as presently claimed.

Here again there is no anticipation because the reference teaches custom selection of pre-existing advertisements, not creation of new advertisements following identification of a target population that is to receive the advertisements. Even Robinson claim 1 recites that the advertisements are merely selected from a pre-existing group ("means for determining which of the one or more advertisements to show the subject based on characteristics of the subject's community").

Other citations demonstrating this distinction abound. For example, in the Summary of the Invention section Robinson teaches sending out a new ad "randomly or on a fixed schedule to a certain number of users" to obtain information on the kinds of advertisements those users want to see. Such ads are definitely not individualized to recipients because the same ad is sent out indiscriminately to the entire group. Robinson also teaches that "[a] number of factors can be used by the software in determining which ads to show." Use of the term "which ads" necessitates there being pre-existing ads, rather than creating new ads for individual recipients as presently claimed. As another example, Robinson teaches rotating a recipient through a series of advertisements (spec., col. 4, lines 55-67). The fact that there is a series of ads to be rotated through implies that the ads are not individualized to specific recipients. Still further, advertisers are given an opportunity to select which ads would be displayed with which content - which again through implies that the ads are pre-existing, and not individualized to specific recipients. (spec., col. 5, line 27-42).

There are several other limitations recited in the dependent claims that are not satisfied by Angles et al. Claim 2 recites that at least some of the commercials are transmitted as executable files. There is no teaching, suggestion or motivation in Angles et al. to use executable files. Angles et al. contemplate using the advertisements as inserts in web pages, which means that they are executed by the web browser rather than being executable files themselves.

Robinson is no better at anticipating the dependent claims than Angles et al. With respect to claim 3, or example, Robinson fails to teach transmitting of advertisements as executable files, and there is no teaching, suggestion or motivation in Robinson to authenticate the files. The entire discussion assumes that the user is viewing content (and indeed the advertising) with a web browser. The Smart Ad Box described at Spec., col. 4, beginning at line 38, is very much assuming that the user is accessing advertising through a web site, which assumes the use of a web browser. There is certainly no teaching, suggestion or motivation to download advertising to the user in the form of an executable file.

With respect to claim 5 (as amended), Robinson fails to teach using a marketing characteristic obtained from a response to a previous commercial, let alone a previous individualized commercial.

With respect to claims 6, 7, 8, and 16, Robinson fails to teach, suggest or motivate one to use video clips in the advertisement, as opposed to a web page that displays the advertisement as an insert.

With respect to claim 10, Robinson fails to teach, suggest or motivate one to use e-mail to transmit commercials. Robinson teaches the contrary, placing of advertisements in web pages referred to as Smart Ad Boxes (spec., col. 4, beginning line 7).

With respect to claims 11, 12, and 16 (as amended), Robinson fails to teach, suggest or motivate one to transmit commercials within a specified time of their creation. Moreover, Robinson is similar to Angles et al. in teaching that content providers would have decision making control over advertisements used in conjunction with their content.

That teaching only makes sense if the advertisements are produced weeks or months before their use, not hours or days as claimed.

The same applies to claims 14,15, and 17 (as amended). Robinson fails to teach, suggest or motivate one to create individualized commercials at all - instead opting to custom select advertisements from a storehouse of previously designed commercials.

Dedrick

Dedrick teaches "dynamically customizing electronic information" using a content adapter that relies upon information in a personal profile database. Here again, the language may sound somewhat similar to the presently claimed subject matter, but only if it is taken out of context.

For one thing, Dedrick contemplates that a client system (i.e., the computer of a consumer or recipient) stores both the personal profile database and a content adapter. When generic advertisements are transmitted to the client system, the content adapter modifies the advertisements and presents them to the client. That teaching runs directly contrary to the presently claimed subject matter because it pre-supposes transmission of generic, unmodified advertisements. The pending claims all require transmission of individualized commercials to a recipient, not generic advertisements that are subsequently individualized.

In addition, Dedrick contemplates that the consumer will himself order the advertisement, rather than the consumer being the target of an advertising campaign.

Still further, Dedrick contemplates that the advertisement is modified according to a consumer preference, as opposed to a marketing characteristic as presently claimed. Thus, Dedrick contemplates that the consumer's content adapter would modify a generic advertisement to display a preferred color scheme, or perhaps to use text rather than audio. (Spec., col. 4, lines 44-65). That sort of preference is different from a marketing characteristic such as gender, age, income level, and so forth as set forth in the pending specification. (eCommercial spec, page 6, lines 1-5).

The differences between Dedrick and the presently claimed subject matter are are not merely design choices. Dedrick purposely locates the personal profile database at the client side (consumer's computer) because he is concerned about privacy of any personal information (see e.g., spec. at col. 1, lines 51-58). In preferred embodiments the user even gets to modify his profile, which is generally not true of profiles held by advertisers. Dedrick also locates the content adapter at the client side, (see figures), presumably because that makes distribution of the advertisements relatively easy.

Turning to the dependent claims, we again see that the various additional limitations are not satisfied by the reference. Dedrick is completely silent on the idea of transmitting commercials as [stand-alone] executable files (claim 2), let alone authenticated files (claim 3). As discussed above Dedrick does not rely on marketing characteristic selected from the group consisting of age, sex, and income (claim 4), nor is there any reason to interpret Dedrick as contemplating that the marketing characteristic includes data obtained from

information provided in response to a previous electronic commercial. Dedrick is silent on the use of use video clips in the advertisements as opposed to web pages containing the advertisements (claims 6, 7, 8, 16), using e-mail to transmit the commercials (claim 10), transmitting commercials within a specified time of their creation (claims 11, 12, 16), or using a specified minimum percentage of individualized commercials in a campaign (claims 14, 15, 17).

Conclusion

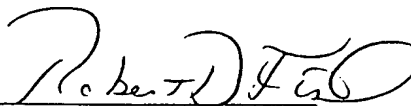

None of the references anticipate or render the presently filed claims obvious. Angles et al. and Robinson, by themselves or in combination have anything at all to do with individualizing commercials, but instead teach selecting pre-existing commercials according to one or another schemes. Dedrick teaches customizing advertisements, but only at the client side so that the customized advertisements are never transmitted to a recipient as part of an advertising campaign. Neither are there any teachings, suggestions, or motivations relating to most of the various limitations in the dependent claims, including transmitting commercials as [stand-alone] executable files, authentication of commercials, use video clips in the advertisements as opposed to web pages containing the advertisements, using e-mail to transmit the commercials, transmitting commercials within a specified time of their creation, or using a specified minimum percentage of individualized commercials in a campaign.

Request for Conference

The present application is of the greatest personal importance to the applicant. If after considering the above arguments and the claim modifications the Authorized Officer still considers the claims to be unpatentable over the prior art, the undersigned would appreciate the opportunity to discuss this matter directly. This could be accomplished by telephone, or if the Authorized Officer finds it appropriate, the undersigned would be pleased to come to Washington to discuss the same, and perhaps develop claims that would be considered allowable.

Respectfully submitted,
Fish & Associates, LLP

IPEA/US 17 AUG 2000

CLAIMS

What is claimed is:

1. A method of conducting an advertising campaign, comprising:
selecting a plurality of targeted prospects for the campaign;
identifying a marketing characteristic for at least some of the targeted prospects;
defining a group of components to be included in the campaign, for which there are at least two alternatives;
subsequently creating a new individualized commercial for each of the at least some of the plurality of targeted prospects by automatically assembling at least one of the alternatives for each of the components in the group based at least in part upon on the marketing characteristic; and
electronically transmitting at least one of the individualized commercials to a recipient having the marketing characteristic upon which the commercial being transmitted was based.
2. The method of claim 1 wherein the step of electronically transmitting comprises transmitting at least some of the commercials as executable files.
3. The method of claim 2 wherein at least some of the executable files are authenticated.
4. The method of claim 2 wherein the marketing characteristic is selected from the group consisting of age, sex, and income.
5. The method of claim 2 wherein the marketing characteristic includes data obtained from information provided in response to a previous individualized electronic commercial.
6. The method of claim 2 wherein the group of components includes at least three visual components and at least one audio component.
7. The method of claim 2 wherein at least one of the components comprises a video clip and at least another of the components comprises an audio clip.
8. The method of claim 2 wherein at least one of the components comprises a video clip and at least another of the components comprises an audio clip, and at least a third component comprises a branding graphic distinct from both the video clip and the audio clip.

IPEA/US 17 AUG 2000

9. The method of claim 2 wherein a variability in the group of components comprises a language employed on an audio clip.
10. The method of claim 2 wherein the step of electronically transmitting comprises sending an e-mail through the Internet.
11. The method of claim 2 wherein transmitting of at least 10% of the commercials occurs within 24 hours of their creation.
12. The method of claim 2 wherein transmitting of at least 10% of the commercials occurs within 2 hours of their creation.
13. The method of claim 2 wherein the step of creating comprises producing an average of at least one of the individualized commercials for every 500 of the targeted prospects.
14. The method of claim 2 wherein the step of creating comprises producing an average of at least one of the individualized commercials for every 50 of the targeted prospects.
15. The method of claim 2 wherein the step of creating comprises producing an average of at least one of the individualized commercials for every 10 of the targeted prospects.
16. The method of claim 2 wherein the marketing characteristics include age, sex, and income, and at least one of the components is a video clip and at least another of the components is an audio clip, and transmitting of at least 10% of the commercials occurs within 24 hours of their creation.
17. The method of claim 15 wherein the step of producing comprises creating an average of at least one of the individualized commercials for every 500 of the targeted prospects.

AMENDED CLAIMS

[received by the International Bureau on 09 March 2000 (09.03.00)
original claims 1, 5, 9 and 11-17 amended; remaining claims unchanged (2 pages)]

1. A method of conducting an advertising campaign, comprising:
selecting a plurality of targeted prospects for the campaign;
identifying a marketing characteristic for at least some of the targeted prospects;
defining a group of components to be included in the campaign, for which there are at
least two alternatives;
producing a number of individualized commercials by automatically assembling at
least one of the alternatives for each of the components in the group based at
least in part upon on the marketing characteristic;
electronically transmitting at least one of the commercials to a recipient having the
marketing characteristic upon which the commercial being transmitted was
based.
2. The method of claim 1 wherein the step of electronically transmitting comprises
transmitting at least some of the commercials as executable files.
3. The method of claim 2 wherein at least some of the executable files are authenticated.
4. The method of claim 2 wherein the marketing characteristic is selected from the group
consisting of age, sex, and income.
5. The method of claim 2 wherein the marketing characteristic includes data obtained
from information provided in response to a previous electronic commercial.
6. The method of claim 2 wherein the group of components includes at least three visual
components and at least one audio component.
7. The method of claim 2 wherein at least one of the components comprises a video clip
and at least another of the components comprises an audio clip.

8. The method of claim 2 wherein at least one of the components comprises a video clip and at least another of the components comprises an audio clip, and at least a third component comprises a branding graphic distinct from both the video clip and the audio clip.
9. The method of claim 2 wherein the variable component comprises a language employed on an audio clip.
10. The method of claim 2 wherein the step of electronically transmitting comprises sending an e-mail through the Internet.
11. The method of claim 2 wherein transmitting of at least 10% of the commercials occurs within 24 hours of their production.
12. The method of claim 2 wherein transmitting of at least 10% of the commercials occurs within 2 hours of their production.
13. The method of claim 2 wherein the step of producing comprises producing an average of at least one of the individualized commercials for every 500 of the targeted prospects.
14. The method of claim 2 wherein the step of producing comprises producing an average of at least one of the individualized commercials for every 50 of the targeted prospects.
15. The method of claim 2 wherein the step of producing comprises producing an average of at least one of the individualized commercials for every 10 of the targeted prospects.
16. The method of claim 2 wherein the marketing characteristics include age, sex, and income, and at least one of the components is a video clip and at least another of the components is an audio clip, and transmitting of at least 10% of the commercials occurs within 24 hours of their production.
17. The method of claim 15 wherein the step of producing comprises producing an average of at least one of the individualized commercials for every 500 of the targeted prospects.

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US99/23781

A. CLASSIFICATION OF SUBJECT MATTER

IPC(6) : G06F 17/30; G06F 17/60
US CL : 705/14, 27

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

U.S. : 705/14, 27

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched
NONE

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
WEST

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	US 5,933,811 A (ANGLES et al) 03 August 1999, col. 2, line 45 thru col. 4, line 47, and col. 12, line 27 thru col. 14, line 26.	1-16
